

1. Develop a program to draw a line using Bresenham's line drawing technique.

```
import turtle
```

```
def bresenham_line(x1, y1, x2, y2):  
    # Calculate the deltas  
    dx = abs(x2 - x1)  
    dy = abs(y2 - y1)  
  
    # Determine the step direction for each axis  
    x_step = 1 if x1 < x2 else -1  
    y_step = 1 if y1 < y2 else -1  
  
    # Initialize the error term  
    error = 2 * dy - dx  
  
    # Initialize the line points  
    line_points = []  
  
    # Start at the first point  
    x, y = x1, y1  
  
    # Draw the line  
    for _ in range(dx + 1):  
        # Add the current point to the line  
        line_points.append((x, y))  
  
        # Update the error term and adjust the coordinates  
        if error > 0:  
            y += y_step  
            error -= 2 * dx  
        error += 2 * dy  
        x += x_step  
  
    return line_points
```

```
# Example usage  
turtle.setup(500, 500)  
turtle.speed(0) # Fastest drawing speed
```

```
x1, y1 = 100, 100  
x2, y2 = 400, 300
```

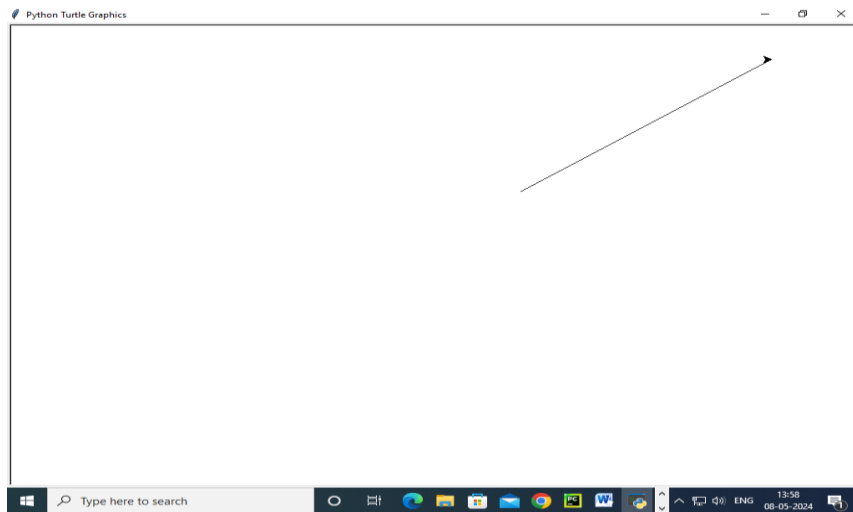

```
line_points = bresenham_line(x1, y1, x2, y2)
```

```
# Draw the line  
turtle.penup()  
turtle.goto(x1, y1)  
turtle.pendown()  
for x, y in line_points:
```

```
turtle.goto(x, y)
```

```
turtle.exitonclick()
```

Output:

2. Develop a program to demonstrate basic geometric operations on the 2D object.

```
import turtle
import math

# Set up the turtle screen
screen = turtle.Screen()
screen.bgcolor("white")

# Create a turtle instance
t = turtle.Turtle()
t.speed(1) # Set the drawing speed (1 is slowest, 10 is fastest)
t.pensize(2) # Set the pen size

# Define a function to draw a rectangle
def draw_rectangle(x, y, width, height, color):
    t.penup()
    t.goto(x, y)
    t.pendown()
    t.color(color)
    for _ in range(2):
        t.forward(width)
        t.left(90)
        t.forward(height)
        t.left(90)

# Define a function to draw a circle
def draw_circle(x, y, radius, color):
    t.penup()
    t.goto(x, y - radius)
    t.pendown()
    t.color(color)
    t.circle(radius)

# Define a function to translate a 2D object
def translate(x, y, dx, dy):
    t.penup()
    t.goto(x + dx, y + dy)
    t.pendown()

# Define a function to rotate a 2D object
def rotate(x, y, angle):
    t.penup()
    t.goto(x, y)
    t.setheading(angle)
    t.pendown()

# Define a function to scale a 2D object
def scale(x, y, sx, sy):
    t.penup()
    t.goto(x * sx, y * sy)
```

```
t.pendown()

# Draw a rectangle
draw_rectangle(-200, 0, 100, 50, "blue")

# Translate the rectangle
translate(-200, 0, 200, 0)
draw_rectangle(0, 0, 100, 50, "blue")

# Rotate the rectangle
rotate(0, 0, 45)
draw_rectangle(0, 0, 100, 50, "blue")

# Scale the rectangle
scale(0, 0, 2, 2)
draw_rectangle(0, 0, 100, 50, "blue")

# Draw a circle
draw_circle(100, 100, 50, "red")

# Translate the circle
translate(100, 100, 200, 0)
draw_circle(300, 100, 50, "red")

# Rotate the circle
rotate(300, 100, 45)
draw_circle(300, 100, 50, "red")

# Scale the circle
scale(300, 100, 2, 2)
draw_circle(600, 200, 50, "red")

# Keep the window open until it's closed
turtle.done()
```

Output:

3. Develop a program to demonstrate basic geometric operations on the 3D object

```
from vpython import canvas, box, cylinder, vector, color, rate

# Create a 3D canvas
scene = canvas(width=800, height=600, background=color.white)

# Define a function to draw a cuboid
